FINANCIAL SNAPSHOT

Projected Product Spend 12 Million
 Projected Services Spend 3 Million
 Bookings 11.5 Million YTD

EXPERTISE

Well versed in all technologies but his core expertise is in Data Center and Network.

RESPONSIBILITIES

Jay leads team that handles all strategy, architecture for all solutions globally.

AREAS OF INFLUENCE

- Enterprise Networking
- Application
- UC
- Data Center Switching

DNA CENTER

Customer is very interested in DNA and is getting ready to purchase it.

SDA

Yes, very interested, same as DNA and is testing it in their lab.

SDWAN

Yes, is doing IWAN today and we are positioning Meraki and Viptela.

VIRTUALIZATION

Yes, large VMware customer, would consider containers.

CLOUD

Moving workloads to Azure, with a goal to move all work loads to the cloud by 2020.

EFT

Have had several EFTs in the past, Spark Board and Cat 9K's.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

Is DNA ready for the enterprise, What will be happening with Prime. He just got back from the Collaboration Summit.

KEY POINTS TO REINFORCE

The strength of the network to support the needs of the business around security and to support the drive to the cloud.

COMPETITIVE ISSUES

ZOOM, Nutanix and MSFT

BIG WIN OPPORTUNITIES

Network refresh to be supported via DNA Center globally. Move the remaining DC to ACI and have a successful POC to get AppD deployed.

COMPETITIVE THREAT

Zoom, Microsoft, Nutanix and ALL the security companies. They focus on best of breed security solutions.

STRENGTHS

- Large Cisco footprint for Network and 650 video end points

WEAKNESSES

- We need our security solutions to be more integrated, and stand alone as best in class
- Today they believe ZOOM is a better solution and a much better price
- We are lacking in the Web security space

OPPORTUNITIES

- Large Wireless and switch refresh
- Moving to ACI, if successful could accelerate DC switching refresh and growth
- Moving them from a IWAN to SD-WAN
- AppD
- SAP move to S4 HANA
- Network segmentation solution

THREATS

- My biggest threat is with collaboration and security
- Unless we step up our security and collaboration game with better execution will be very hard to grow that business

EXPERTISE

Principal Engineer (VP level) and technical leader with expertise in Data Center and Enterprise network technologies including Cisco, Arista, NSX, F5.

RESPONSIBILITIES

Team responsible for engineering and operations of Data Centers globally as well as overall American Express network technology vision and roadmap.

AREAS OF INFLUENCE

- Data Center
- Enterprise Networking
- Security

DNA CENTER

Currently testing in lab.

SDA

Currently testing in lab.

SDWAN

Currently deploying Viptela SDWAN. Have signed 5 year EA.

VIRTUALIZATION

High level of interest in deploying NFV. Currently deploying VXLAN in DC. Investigating VXLAN in campus.

CLOUD

Hybrid cloud strategy. On prem cloud plus looking at burst capabilities in AWS/GCP.

EFT

Cat 9300, Cat 9400, Jabber 12.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

Quality issues with Nexus 7k, Catalyst 3850 software.

KEY POINTS TO REINFORCE

Cisco's commitment to innovation, open standards and open APIs.

COMPETITIVE ISSUES

Open to all competitors including Arista, NSX, Dell/EMC, Cumulus Networks, Aruba/HPE.

BIG WIN OPPORTUNITIES

SDA, Trustsec/SGTs, DNA-C, Nexus 9k, ACI and integration with SDA, SDWAN.

COMPETITIVE THREAT

Arista, Dell/EMC (switching), Cumulus Networks, Aruba.

FINANCIAL SNAPSHOT

Projected Product Spend	30 Million
Projected Services Spend	6 Million
Bookings	36 Million

EXPERTISE

New talent in the Bosch IT organization, keen to take more responsibility, worked for end customer and partner, good industry knowledge.

RESPONSIBILITIES

Responsible for architectural blueprints and evaluation of Enterprise Networking solutions including management, Lifecycle Management, new features evaluation and acceptance testing.

AREAS OF INFLUENCE

- Campus LAN
- Mobility
- NW Management

DNA CENTER

- **3-6 months:** Use case for Apple MacBook security and developer workplace
- **Long-Term:** Introduce DNAC installed as the primary platform
- **Blockers:** Many different management platforms (Spectrum, PI, ...).

SDA

- **Planning to deploy:** Yes, customer accepted our innovation and advantages like micro segmentation, but hard to implement today
- **3-6 months:** Scheduled POV test in 2018
- **Long-Term:** Planning pilot site for SDA end of 2018
- **Blockers:** Dual Vendor strategy, very heterogenic network (many different HW platforms), running approach to have on every site only one vendor, today Cisco access based on C2k, price uplift to SDA does not reflect operational savings.

SDWAN

- **Medium to long-term:** Internet-Offloading of existing MPLS lines
- **Blockers:** WAAS Roadmap, today ISR deployed + WAAS appliances, Service Provider dependencies

VIRTUALIZATION

- **Planning to deploy:** See SDA, Virtualization in EN = Microsegmentation

CLOUD

- **Today:** PCCI Public Cloud managed by Bosch Corporate IT
- **Medium to Long-Term:** Cloud Brokerage, Multi-Cloud (Azure/AWS), Cloud Security, Umbrella, Cloud and Identity Mngt

EFT

2018 EFT of Candid (CNAE) in Dec-Jan 2018

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

SW quality of Cisco (many bugs in C3k, ACI, WAAS) -> "If Cisco can't fix basic bugs in today's software, why should new approaches like SDA have better SW quality?"

KEY POINTS TO REINFORCE

SDA is a journey, Bosch needs to start. Imagine, what happens to BCN in 2020 is nothing changes?

COMPETITIVE ISSUES

HP/Aruba in the access layer (dual vendor strategy)

BIG WIN OPPORTUNITIES

SDA/DNAC/Security

COMPETITIVE THREAT

HP/Aruba in LAN, MSFT in Collaboration

STRENGTHS

- Bosch IT organization has high technical skills
- Bosch IT having high in-house IT production depth

WEAKNESSES

- Automotive account culture, very cost driven decision making
- Low Cisco feature usage today (dual vendor, reducing to the common denominator)

OPPORTUNITIES

- Bosch IT willing to go new SDA path (like with ACI)
- Migration of OT networks (L2 to L3)

THREATS

- Dual Vendor Strategy
- Installed Base hurdles

FINANCIAL SNAPSHOT

Projected Product Spend 12 Million
Projected Services Spend 5 Million

CISCO SERVICES

Smartnet, AS, Collaborative Support

RESPONSIBILITIES

Team handles all strategy, architecture, and support of network, security and collaboration.

AREAS OF INFLUENCE

- Enterprise Networking
- Security
- UC
- Data Center Switching

DNA CENTER

Customer is very interested in DNA. It's on their roadmap to implement. Looking for stability and features before they move forward.

SDA

Yes, very interested, same as DNA.

SDWAN

Yes, will deploy Viptela this year.

VIRTUALIZATION

Yes, large VM Ware customer, would consider containers.

CLOUD

Moving workloads to AWS and Azure, still building out strategy for private cloud.

EFT

Have had several EFTs in the past, Spark Board, Speakerphone, switches.

TALKING POINTS
ISSUES CUSTOMER MIGHT RAISE

Is DNA ready for the enterprise, we have had challenges executing on AS projects, shipping delays.

KEY POINTS TO REINFORCE

DNA is ready and being adopted by large customers.

COMPETITIVE ISSUES

Will be replacing Checkpoint, we will compete with Fortinet.

BIG WIN OPPORTUNITIES

Looking to take a wireless first approach, will refresh wireless globally and build an overlay network with Cat 9Ks.

COMPETITIVE THREAT

Zoom, Microsoft, Fortinet

STRENGTHS

- Large Cisco footprint, quality IT team, knows Cisco well
- If we can execute on transition from two platforms, Spark and WebEx we can own all collaboration

WEAKNESSES

- We Cisco are having challenges scaling with resources from my perspective, team and BU resources can be scarce
- Too many confusing analytics and management tools
- We need our security solutions to be more integrated, and stand alone as best in class
- Logistics and managing order shipments

OPPORTUNITIES

- Large Wireless and switch refresh
- Moving to ACI, if successful could accelerate DC switching refresh and growth
- Some SD-WAN, they only have 30 locations

THREATS

- My biggest threat is with collaboration, Microsoft Teams is scary
- Unless we step up our security game with better execution will be very hard to grow that business

FINANCIAL SNAPSHOT

Projected Product Spend 10+ Million
Projected Services Spend 2 Million
Bookings FY18 - \$4M

CISCO SERVICES

ACI, Tetration, Smartnet, Umbrella, WLAN, EN-1 building,
Telemedicine solutions

EXPERTISE

Well versed in all technologies but his core expertise is in
Switching.(Enterprise and DC)

RESPONSIBILITIES

Architecture for 2 Data Centers, multiple facilities, many are
critical care for Children's. Involved with Wireless, Security, WAN.

AREAS OF INFLUENCE

- Enterprise Networking
- Security
- WLAN
- Data Center Switching

DNA CENTER

Customer is very interested in DNA. It's on their
radar to consider to replace Avaya/Extreme.

SDA

Yes, very interested, same as DNA.

SDWAN

Will Consider--use Regional Optical ring for most
sites today.

VIRTUALIZATION

Yes, large UCS and VMware customer, would
consider containers.

CLOUD

Slow moving to cloud; have pockets.

EFT

They want to learn more.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

Is SDA ready for the enterprise and is it
as easy and we say it will be?

KEY POINTS TO REINFORCE

DNA is ready and being adopted by
large customers.

COMPETITIVE ISSUES

Fortinet; Extreme ceap switching,
Avaya UC in the Cloud

BIG WIN OPPORTUNITIES

Replace 18,000 IP ports and 1
4,000 Handsets

COMPETITIVE THREAT

Zoom, Microsoft, Fortinet; Avaya UC in
the Cloud

STRENGTHS

- Growing Cisco foot print;
Traditional Avaya/Nortel/
Extreme shop.
- Talented IT team, learning Cisco.
- Executive involvement from both
CCHMC and Cisco
- Gaining a Security foothold with
Umbrella and Cloudlock
- Large UCS user

WEAKNESSES

- Have had some Wireless issues
with Code on 3802i APs.
- We need our security solutions
to be more integrated, and stand
alone as best in class
- Need more BU and Healthcare
resources to leverage this very
important Children's Hospital -
Ranked 3rd globally.

OPPORTUNITIES

- Large Access layer refresh - SDA
- Moving to ACI and using
Tetration, success could
accelerate DC growth
- UC replacement of all Avaya
- UC video upgrade of Polycom
- Security EA
- Large 8 story tower to be
completed in 2020-need multiple
solutions

THREATS

- My biggest threat-Microsoft
- Number two is Best of breed-
Security purchases
- Number three is using old legacy
gear for many more years.

EXECUTIVE PROFILE

HEATHER SKAGGS

Global Senior Manager Infrastructure Engineering

TRUST IN CISCO

■■■■ MEDIUM

PERSONAL INFO

	Home	Hudson, OH
	Interests	
	Languages	English

FINANCIAL SNAPSHOT

Projected Product Spend 10-15 Million
Projected Services Spend 2-4 Million
Bookings 7.5 YTD

CISCO SERVICES

Example: Extensive smartnet, AS BCS and PDI Proposed for ACI 9k Deal

EXPERTISE

Heather has responsibility for Engineering at Eaton across all our technology domains and control points, those are core networking in the campus, wireless, wired, datacenter and Unified Communications (Voice, WebEx, Video).

RESPONSIBILITIES

Her team handles all engineering work as mentioned above except Contact Center.

AREAS OF INFLUENCE

- Enterprise Networking
- UC
- Compute and Storage Platforms
- Data Center Switching

DNA CENTER

Customer is very interested in DNA. Eaton Needs feature parity with Prime, customer is highly dependent on Prime, refresh is steady but slow.

SDA

Yes, very interested, same as DNA.

SDWAN

Yes - Currently competitive proposals from ATT Flexware Managed NFV powered by Velocloud.

VIRTUALIZATION

Highly virtualized on vmware, automation and hybrid cloud strategy based on MS OMS.

CLOUD

Invested and growing in Azure and AWS Private cloud is still nascent, customer lacks automation and centralized control of cloud consumption.

EFT

- Early Nexus 7k/OTV customer
- No active pilots currently

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

How do we help a customer with a very large install base to get to DNA / SDA, knowing that they won't do a big bang refresh.

KEY POINTS TO REINFORCE

Reinforce SD DC Networking Strategy

COMPETITIVE ISSUES

See below

BIG WIN OPPORTUNITIES

9k/ ACI DC Network Transformation

COMPETITIVE THREAT

- Dell/EMC/VCE relationship - UCS incumbency at risk via vblock, lost hyperconverged to VX Rail
- Many best of breed security players
- O365 / Teams over Cisco Meetings, WebEx and Jabber

STRENGTHS

- Longtime Cisco customer in core networking
- Great LOB alignment with IoT use cases in the Factories as well as sell through (Joint go to Market)
- Recent Avaya takeout in the UC space
- Recent WebEx takeout over ATT connect
- Continued growth in Contact Center

WEAKNESSES

- Security relationship is non-existent, customer is defense in depth / best of breed
- Perception is Cisco Services is priced out of market, both transactionally (SNT) and AS
- Customer owns Spark, and didn't even look at it, due to the high visibility that their O365 commitment had at executive levels (lots of pressure to consume the MS EA)

OPPORTUNITIES

- Nexus 9k / ACI DC Network Transformation
- Application Performance Management (AppD)
- Advanced Malware Protection (AMP)
- SAP re-platforming planned for next year

THREATS

- Dell/EMC/VCE relationship - UCS incumbency at risk via vblock
- Workloads going to public cloud, losses in mindshare on Hybrid cloud and automation strategies
- MS Teams and O365 commitment are putting pressure on Jabber, WebEx - although we don't expect a shift for a couple years

FINANCIAL SNAPSHOT

Projected Product Spend30 Million
Projected Services Spend15 Million
Bookings45 Million

CISCO SERVICES

AS, Combined Services, SME engagements

EXPERTISE

Network Operations

RESPONSIBILITIES

Lead person for Edge Networking technology (Branch, SDA, SD WAN)

AREAS OF INFLUENCE

- Enterprise Networking

DNA CENTER

Interested in DNA Center, but their corporate direction is Multi-vendor with Ansible for automation.

SDA

Interested.

SDWAN

Interested in SDWAN as a managed service. Currently testing a pilot of Versa as a managed service from Verizon.

VIRTUALIZATION

VMware / NSX customer. Interested in segmentation using Tetration.

CLOUD

Microsoft Azure is the major cloud provider, but they are open to other cloud providers in a multi-cloud environment.

EFT

Customer does not have EFTs at the moment.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

DNA Center appears to be a Cisco-only solution. ExxonMobil prefers to avoid vendor lock-in.

KEY POINTS TO REINFORCE

Adoption of Cisco infrastructure does NOT depend on DNA Center. Ansible and OpenConfig Device models are preferred.

COMPETITIVE ISSUES

Cisco is under threat by Juniper and white box.

BIG WIN OPPORTUNITIES

- Secure Agile Exchange for CoLoS
- Integrate Wireless into SDA

COMPETITIVE THREAT

Juniper, HP, White Box, Treat Ansible as a partner. We can win with Cisco Infrastructure + Ansible.

STRENGTHS

- Large Cisco footprint
- Large adoption of wired 802.1x. Estimate around 1 million ports.
- Platinum Account
- Global Account team with Cisco resources in Texas, Canada, Hungary, Malaysia, Singapore, Argentina.
- Global Advanced Services with Cisco resources in Texas, Hungary, Singapore.

WEAKNESSES

- Software quality. Cisco fixes bugs in specific releases, but doesn't move the fixes to other releases. Example IBNS 2.0 features in IOS XE 16.
- Too many product types and software versions from Cisco in the legacy network.
- They want to replace end of life hardware, but it is too difficult to convert the old IOS config to the new IOS config.

OPPORTUNITIES

- Large Refresh opportunity - Around 30 percent of the network has reached Last Day of support. The challenge is that they can't convert from the old IOS image to the new one.
- Testing Versa SD-WAN, but this doesn't exclude Viptela. The Versa test is to test the concept of SDWAN.

THREATS

- Juniper, White Box
- Cisco Quality issues prevent adoption of Cisco technology
- Exxon is a large WAAS shop. If it appears that Cisco is dropping WAAS then Riverbed gets in and sells their SD WAN solution.

EXECUTIVE PROFILE

PETER KISPERT
Chief Engineer

TRUST IN CISCO

■ ■ ■ ■ ■ HIGH

PERSONAL INFO

Home	Dallas, TX (actually McKinley)
Interests	Family, Kids sports, technology, travel
Languages	English

FINANCIAL SNAPSHOT

Projected Product Spend85 Million
Projected Services Spend20 Million
Bookings95 Million YTD

CISCO SERVICES

Smartnet, AS, NOS

EXPERTISE

Well versed in all technologies but his core expertise is in Data Center.

RESPONSIBILITIES

Peter is one the architects that makes recommendations for all technologies across FedEx globally.

AREAS OF INFLUENCE

- Enterprise LAN Networking
- Enterprise WAN Networking
- Data Center Switching

DNA CENTER

FedEx is taking some small looks at DNA Center, but they are cautious because they have not been pleased with our history in net mgmt.

SDA

At least 2 years out. They have started buying Cat 9Ks, but they feel like SDA is not quite there and they pretty risk averse in deploying new technology.

SDWAN

They are deploying iWAN right now and they have about 700 locations up and operational. They are trying to figure out DIA right now. We are educating them about SDWAN, but they will not embrace SDWAN until the SDWAN supports legacy technologies (like voice) on the ISR4K.

VIRTUALIZATION

FedEx is a big VM shop. When it comes to Network Virtualization strategy, then FedEx is not really looking at this. They know they need educate themselves and build a strategy, but their resources are stretched thin.

CLOUD

FedEx has some shadow public cloud environments that are already in use. They are working with Azure for their standard public cloud deployment. They are also in the process of finalizing their internal private cloud environment.

EFT

They do participate some, but they are limited in resources and it is hard to dedicate the time and resources.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

- DNA and SDA Access - Is it ready?
- Shipping delays
- Why have multiple fabrics
- Scale

KEY POINTS TO REINFORCE

Cisco is open.

COMPETITIVE ISSUES

Arista and they use Extreme for Wireless (need to be careful there). They have a ELA with Microsoft, Oracle, and Dell/EMC. They are also a very large HP server customer.

BIG WIN OPPORTUNITIES

We are working with them on a ELA. FedEx calls it a Strategic Framework Agreement. Lifecycle Management is another big win opportunity.

COMPETITIVE THREAT

- Wireless standard at FedEx is Extreme
- Security is mostly Checkpoint and McAfee
- Arista is continuing to knock on the door
- Microsoft is the desktop strategy of FedEx
- Dell/EMC is trying to position VxRail/VXRail in the DC

STRENGTHS

- Install Base
- Long standing relationship
- Cisco Services - example would be NOS

WEAKNESSES

- Management
- Scale
- Two many Fabrics

OPPORTUNITIES

- Lifecycle management
- DC Lifecycle refresh
- ELA
- Segmentation

THREATS

- Competition
- Groups outside of networking that want to push their agenda
- Two board members on ONUG
- They are starting to decommission WAAS and starting to look at Riverbed because of too many outages. This could cause problems for future SDN sales.

EXECUTIVE PROFILE

PAUL CURRIE

AVP Enterprise Architecture Chief Technologist

TRUST IN CISCO

■■■■■ HIGH

PERSONAL INFO

	Home	Nashville, TN
	Interests	Hockey
	Languages	English

FINANCIAL SNAPSHOT

Projected Product Spend	83 Million
Projected Services Spend	20 Million
Bookings	79 Million

CISCO SERVICES

Smartnet, AS, Collaborative Support

EXPERTISE

Paul Currie is currently serving as Chief Technologist at HCA Healthcare. His technology experience spans over 27 years and for the past 15 years has focused his expertise in healthcare IT. Keeping a pulse on emerging technologies and directing the technical architecture for an IT organization that supports over 160 HCA facilities and close to 800 clinics, Paul has been involved in many strategic initiatives that have changed and shifted the delivery, integration and consumption of data and applications. His involvement in healthcare data management, cloud strategy, collaboration, mobility and other foundational initiatives has placed him in a unique position to help influence, direct and support both mature and evolving technologies at HCA.

RESPONSIBILITIES

Directs Architecture and Strategy team

AREAS OF INFLUENCE

All technologies

DNA CENTER

We are in the process of doing this in a lab and will be working on proposals for a few pilot sites. Production sites probably 12 months out.

SDA

They are willing to lab the functionality out but are currently hesitant on deploying anything in production until the technology bakes in a little longer.

SDWAN

They have a "WAN Encryption Project" that has continually been put on the back burner. Our initial goal was to utilize IWAN for this once they were ready but we are now looking to position Viptela when the time is ready.

VIRTUALIZATION

We have just started discussions around the CSP2100 platform to enable HCA to deploy NFV in the data center without having to run on VMWare.

CLOUD

Ongoing development of strategy. Internal conflict re. public vs private.

EFT

Many EFTs including Access switching and all manner of wireless EFTs, DNA.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

They have experienced several DC outages as of lately, with quite a few of them being ACI related (either caused by the customer due to SW issues). These are definitely tarnishing our image when it comes to providing a highly available data center and could jeopardize any future with ACI deployments. EOL 8510's after 5 years of CAP cases and switching out 5760's across enterprise due to instability.

KEY POINTS TO REINFORCE

- DNA is ready and being adopted by large customers
- Cisco's commitment to Next Gen Wireless

COMPETITIVE ISSUES

While we've won the general compute business with UCS they refuse to look at Hyperflex and have standardized on Nutanix/Super Micro for any Hyperconverged use cases.

BIG WIN OPPORTUNITIES

xCat

COMPETITIVE THREAT

Aruba, HP, EMC/Dell, Checkpoint, PAN

STRENGTHS

- We own a majority of their DC hardware business with UCS, ACI, MDS, ASR9K and con
- We own all of their enterprise hardware business with ASR1K, ISR4K, Cat3K/6K/9K, and 85XX WLC
- We are constantly referred to as one of their top (3) trusted vendors/partners

WEAKNESSES

- DC Stability on ACI
- General education about solutions we've sold (ACI and UCSD in particular)
- Code stability in wireless

OPPORTUNITIES

- Hyperflex to win over Nutanix
- SW opportunities by enabling their private/public cloud endeavors with UCSD and potentially CloudCenter
- Enabling visibility and security in the DC through a Tetration pilot that is about to start
- Enabling better visibility and quicker resolutions to issues through DNAC

THREATS

- HP/Aruba trying to capitalize on wireless issues
- Other partners/vendors trying to capitalize on the latest DC outages
- Expansions in Nutanix will eat away at our UCS business as they run it on Super Micro

FINANCIAL SNAPSHOT

Projected Product Spend	30 Million
Projected Services Spend	3 Million
Bookings Product	19.5 Million (YTD)
Bookings Services	7.5 Million (YTD)

EXPERTISE

Successful leader in Information Technology, credited with aligning business goals with engineering solutions for Data & Voice networks, Data Center Architectures, and interactive collaboration services, while maintaining a strong focus on customer success and satisfaction. Over 25 years of experience in the industry, highly accomplished with excellent ability to build and maintain successful relationships.

Former Cisco SE, CSE, SEM

RESPONSIBILITIES

Lead a global team of 50+ in designing and delivering network services supporting over a thousand sites which consist of manufacturing, distribution centers, office towers and data centers. The world-class global enterprise network enables one of the largest global deployments of Microsoft Lync/Skype, SAP, PeopleSoft, Salesforce and similar business applications and technologies via hybrid cloud model.

AREAS OF INFLUENCE

- Enterprise Networking
- Security
- Data Center Networking

DNA CENTER

Customer is very interested in DNA. It's on their roadmap to implement. Looking for stability and features before they move forward.

SDA

Use TruSec today but no plans for SDA yet due investment required to deploy to 1000+ sites and concerns about TrustSec/SDA migration.

SDWAN

120 sites on Cisco IWAN, lack of TrustSec support in Viptella / SD-WAN keeps Honeywell on IWAN 2.2. CWS to Umbrella migration has been painful. RFP in works for WAN circuit cost reduction and LAN/WAN lifecycle management services.

VIRTUALIZATION

eNFV / ENCS testing to begin in 2018.

CLOUD

DIA with SDWAN, Azure, AWS.

CWS to Umbrella transition has slowed us down. Want TrustSec features in Azure & AWS.

EFT

EFTs: mGig EFT, WLC 8.4 EFT, ISE 2.x EFT, Nexus 1000v EFT

PoC: C9300, APIC-EM, FastLane

TALKING POINTS
ISSUES CUSTOMER MIGHT RAISE

Scaling issues with DNA Center, direction change from IWAN to SDWAN (Viptella), direction change from CWS to Umbrella, software quality / defects.

KEY POINTS TO REINFORCE

Continued investment in evolution of EN portfolio focusing on ease of deployment, ease of management, and ease of troubleshooting.

COMPETITIVE ISSUES

NSX, Velocloud, "Whitebox"

BIG WIN OPPORTUNITIES

Enterprise Network EA or Cross-catalog EA.

COMPETITIVE THREAT

HP, Microsoft, Palo Alto, Dell, Nutanix, AT&T FlexWare, "White box", VeloCloud

STRENGTHS

- Cisco TrustSec is deployed to help maintain security compliance tied to \$5bn of Honeywell's revenue
- Cisco EN portfolio is standard globally (WAN, LAN, WLAN, etc)

WEAKNESSES

- Customer has difficult time deploying Cisco EN equipment efficiently
- Slow to adopt new technologies
- Often hit quality issue with products due to use of advanced features (e.g. TrustSec)

OPPORTUNITIES

- Global SD-WAN deployment (only 12% deployed today)
- New consumption models
- Improved end-customer experience through DNA Center Assurance
- ITaaS

THREATS

- Constant pressure for IT to reduce costs
- MSPs that want to offer end-to-end managed solution (non-Cisco)

FINANCIAL SNAPSHOT

Projected Product Spend 150 Million
Projected Services Spend 20 Million*
Bookings 139 Million YTD

*Prepaid \$180M 4yr SNT/HTTS/NOS in FY17

CISCO SERVICES

Smartnet, AS, NOS, HTTS, SOW

EXPERTISE

Routing and Switching, BGP, IP Multicast, network design.

RESPONSIBILITIES

Provides all strategy, architecture, and design of networking;
Campus, Branch, Core WAN.

AREAS OF INFLUENCE

- Enterprise Networking Technologies
- Branch (5000+ locations)
- Campus (600 locations)
- Core WAN (ASR 9xxx)

DNA CENTER

The customer has acquired NSO and Pronghorn for automation. They also have interest in DNA Center as it evolves. They've been exposed to APIC-EM in the past, but didn't move forward due to fit for their use case.

SDA

The customer is somewhat interested in SDA as it relates to the larger DNA strategy.

SDWAN

The customer has some interest in SDWAN, but their security restrictions prohibit Viptela adoption.

VIRTUALIZATION

The customer makes extensive use of VM technologies. In addition, NFV has been evaluated but is early in adoption.

CLOUD

The customer has developed their own private cloud architecture. Due to risk and regulatory concerns, public cloud adoption ramping up slowly.

EFT

The most recent EFT was for ASR 9901 in Q1CY18. They have participated in several EFT's for Ent Networking platforms in previous years.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

Is DNA Center ready for their enterprise, they have looked at APIC-EM in the past, and it wasn't a good fit. Third party platform support is key.

KEY POINTS TO REINFORCE

DNA is ready and being adopted by large customers.

COMPETITIVE ISSUES

White box platforms are repeatedly raised.

BIG WIN OPPORTUNITIES

The campus switching platforms are nearing EoX and will need to be refreshed. Core network to be redesigned using ASR 9xxx platforms.

COMPETITIVE THREAT

- Brocade and Juniper for Core WAN
- Forescout for NAC
- Cradlepoint for branch
- Aruba for wireless
- HP for switching
- Ciena for Optical
- White box for NFV

STRENGTHS

- Excellent partnership
- Core network refresh without RFP
- Branch network of (5000) ISR 4xxx
- Strong AS alignment

WEAKNESSES

- Customer on CAP due to perception of Cisco code quality, significant outage
- JPMC network scale is frequently larger than Cisco enterprise solutions
- Perception that Cisco is slow to close feature gaps, feature velocity
- Cisco note seen as security player

OPPORTUNITIES

- Large Wireless and switch refresh
- Significant core WAN refresh ASR9K
- MACSec secure transport
- Automation - NSO, WAE, DNA Center

THREATS

- Recovery of Cisco reputation after CAP
- JPMC multi-vendor
- Reverse auctions for procurement
- Value selling becoming more difficult in commoditized process

FINANCIAL SNAPSHOT

Projected Product Spend 30 Million
 Projected Services Spend 8 Million

EXPERTISE

Business leader who has a long history working at McKesson. He has seen the "Old McKesson" and is one of the forefronts in helping bring them into the Agile world. His expertise is on the business side of technology, so he manages the Network and Security "Agile Train" and operationalizes all the business needs that come out of that train.

RESPONSIBILITIES

Handles the global network/security architecture from a business standpoint. He works with Brian Silverman who is the global architect but from the business perspective he is responsible to bring it up the chain for all decisions made to standardize.

AREAS OF INFLUENCE

- Enterprise Networking
- Wireless
- Some Compute
- Security
- Some Data Center

DNA CENTER

They are planning to deploy in the next 3-6 months if the PoC goes well.
 **Aruba competition in wireless.

SDA

They are planning to deploy in the next 3-6 months if the PoC goes well.
 **Aruba, Cisco's ability to execute and show value quickly.

SDWAN

They are planning to deploy. Hoping to sign and EA in April, what could cause it to stall is with Legal/Finance signatures.

VIRTUALIZATION

TBD.

CLOUD

They have a huge cloud strategy and initiative going on right now. Everything is in line with their move the cloud.

EFT

SDA, SDWAN, Cloud Telephony HCS, ISE/Stealthwatch, Meraki

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

- He is concerned about Amazon and what their strategy is around distribution.
- Aruba is cheaper.
- Afraid to go with One vendor as it may give them less flexibility
- Difficulty selling to his customers (i.e. the business units)

KEY POINTS TO REINFORCE

That going with Aruba in the wireless space not only defeats the SDA story he loves but it also completely ruins the standardization efforts he is making. Once they have decided on a standard they need to start moving forward. How to operate in an agile Framework.

COMPETITIVE ISSUES

Aruba: Stress the importance of cisco services over Partners (especially around segmentation)

BIG WIN OPPORTUNITIES

SDWAN, Meraki in all Pharmacies, Stealthwatch/ISE ELA, Advanced Services engagement needs to go up.

COMPETITIVE THREAT

- Aruba in wireless.
- Stress the importance of Cisco services over Partners (especially around segmentation)
- ISE against Fortinet/clearpass

STRENGTHS

- Well connected and holds a lot of respect in the company/organization
- Fan of Cisco and clearly able to articulate what he is looking for
- Understands both technology and business impacts of the enterprise tech he is looking at
- Excited about the opportunity ahead

WEAKNESSES

- Tough to get moving on a decision. Even when he decides something he is slow to execute.
- Needs to do a better job of communicating up and down the chain about his initiatives
- In his role he needs to clearly articulate the global strategy to the people under him better in order to have people moving in the right direction.
- He is now responsible for a lot and this may be a bit overwhelming for him. Need to paint the broader strategy, give him a roadmap for how to take McKesson to the next generation of networking: I.E. how to execute an SDWAN, SDA, IBN, Security enriched approach to revitalizing their network.
- AND HOW does that work across Cisco, Meraki, and Viptela - he is very unclear about our strategy moving forward with Cisco traditional and Meraki and how they will overlap - he sees it as "two different companies" at this point.

OPPORTUNITIES

- SD WAN, SDA - Cisco Cat 9k and Meraki with Viptela for their global network standard and strategy. How do they all fit together?
- ISE/Stealthwatch and any ability to help them stay secure and give them visibility - including anyconnect.
- Tetration/AppD/Azure Cloud Support and how do we increase their visibility and ability to use analytics.
- Distribution centers and how do we streamline their supply chain.

THREATS

- Threats from Aruba right now in the wireless space. He thinks they are easy and cheaper. Especially around distribution centers. But this blows up their standardization story.
- Palo Alto Networking is their chosen Edge Firewall.
- WWT services and Cisco services overlap in a lot of places.

FINANCIAL SNAPSHOT

Projected Product Spend 150 Million
 Projected Services Spend 20 Million

EXPERTISE

Respected IT leader who focuses on campus networks and automation. Very experienced in scripting and has helped moving workloads to Oracle Cloud.

RESPONSIBILITIES

He is a key decision maker on campus platforms, architecture and automation strategy.

AREAS OF INFLUENCE

- Enterprise Networking
- Automation

DNA CENTER

Had lab time on DNAC and Assurance. Will set up internal lab and PoC Automation. Shared comments that Assurance has ways to go.

SDA

Will set up lab to prove out automation, network overlay. No solid timeline yet. Will proceed with care due to 1.x.

SDWAN

No immediate plan. WAN architect focuses on segment routing instead. SVS test of segment routing is underway.

VIRTUALIZATION

There is interest for NFV where routing, switching, FW and other apps virtually run on a server.

CLOUD

Aggressively moving workload to Oracle's OCI Cloud.

EFT

- SVS testing of Cat9K
- Internally certifying C9K as a replacement platform; close to completion
- Tetration as a service PoC for Oracle Cloud (not Marcus' primary responsibility)

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

- IPV6 on SDA. Customer will need SDA support v6 end points.
- Migration strategy for SDA. Lessons learned so far on SDA

KEY POINTS TO REINFORCE

SDA's benefits as experienced by early adopters

COMPETITIVE ISSUES

Fortinet is the current FW standard. We'll need ASA being to run on Oracle Cloud in order to compete but BU has not been able to commit resources.

BIG WIN OPPORTUNITIES

Establish C9K and SDA.40M of EOL gears; ELA renewal upcoming; Tetration adoption on Oracle Cloud.

COMPETITIVE THREAT

Tool team is focusing to replace Prime with ARMIS that competes with Assurance.

STRENGTHS

- Solid position in WAN, campus and DC switching with Corp IT.
- Strong interest in adopting Tetration as a service.
- Spark adoption on the uptick

WEAKNESSES

- FW standard is Fortinet

OPPORTUNITIES

- Accelerate campus refresh leveraging SDA automation
- Wide Tetration adoption
- Expand Spark and Spark boards
- Expand FW IPS

THREATS

- ARMis as Prime replacement. Assurance is still 1.x to customer
- Continued expansion of Fortinet
- Arista and Juniper DC switching and routing in Cloud orgs

Projected Product Spend.....	15 Million
Projected Services Spend	5 Million

His most recent promotion gave him the head of the "Change The Bank" group. This group is in charge of network engineering and is also responsible for introducing new technology and processes to "Change" the bank.

Handles all network infrastructure technologies for the enterprise.

- Carrier Routing (MPLS and DCI Core)
- Branch Routing and Switching
- Back Office Routing and Switching
- Load Balancing and DNS Deployment
- Data Center Switching and Routing
- Firewalls
- Wireless

Currently getting ready to start DNA center for automation and provisioning of their new Back Office Transformation Project.

Talking a Crawl, Walk, Run Approach to SDA
and once the first 9Ks are installed will expand
to SDA

Cisco's largest SDWAN customer and will be expanding by over 4000 more locations.

Very Large VMWare Customer and looks at VMWare as their strategic partner in the datacenter.

Still investigating cloud. Very hesitant to jump into the cloud, but know it is coming. Very small cloud deployments.

- Currently testing the EFT of the Viptela running on an ISR 4331

- Financial leadership among peer group
- PNC Bank is a well established top 5 brand
- PNC is poised to really expand in other markets and areas

- Operational hurdles
- PNC does not have the basic processes down pat to really move to the next chapter (Automation, etc.)
- PNC trying to build a lifecycle strategy, but they are still very immature

- Expansion of the Viptela Infrastructure
- Standardization on Catalyst 9Ks for all switching infrastructure
- Possible migration to Nexus 9Ks for Data Center refresh opportunities

- Due to technology refresh cycles, their Data Centers are built on legacy Nexus 7K technologies instead of 9K
- VMWare has a significant leadership position and their data centers are built upon NSX as their virtual switching layer
- Zscaler was introduced to PNC (Through Viptela) and now they are really piloting a lot of Zscaler technologies

DIDIER WEIZMAN

Sr. Global IT Fellow Strategy & Architecture

TRUST IN CISCO

■ ■ ■ ■ ■ HIGH

PERSONAL INFO

 Home	Primary home in Massachusetts, second home in Maine.
 Interests	Swiss origin. Skier, Mountaineering
 Languages	English, Swiss

FINANCIAL SNAPSHOT

Projected Product Spend \$35-40M FY18
 Projected Services Spend \$9-10M FY18
 Bookings YTD - \$28M

CISCO SERVICES

Smartnet - Managed Services - AS

EXPERTISE

Extremely knowledgeable on Cisco. Very forward thinking and looking to understand Cisco's future road maps.

RESPONSIBILITIES

Didier oversees and handles all IT strategy, architecture, and support of network, Data Center and collaboration on a global basis. Didier is being groomed to become CTO at some point is the rumors.

AREAS OF INFLUENCE

- Enterprise Networking
- UC
- Data Center Switching

DNA CENTER

Raytheon - Was one of the first adopters of DNA Center and have had it in their labs for over 8 months. They are planning on a complete roll out within the next 3 months.

SDA

Raytheon will be purchasing this QTR appx \$10M in CAT9K for global deployment.

SDWAN

Currently using and looking at investing in Cisco's NCS platform. Over 200 locations globally. Have recently seen Viptela, but difficult for them to deploy based on government regulations.

VIRTUALIZATION

Raytheon is heavily virtualized with VMware and have an ELA with VMWare

CLOUD

Using AWS for Dev.
 Due to Federal law, it's difficult for Raytheon to adopt much cloud. Unless FedRAMP certified.

EFT

Spark boards.

TALKING POINTS

ISSUES CUSTOMER MIGHT RAISE

Quality issues with the DNA center. Raytheon has been working closely with the BU around several issues. Also our new software licensing models.

KEY POINTS TO REINFORCE

Cisco's commitment to quality and road maps.

COMPETITIVE ISSUES

Aruba on WLAN.

BIG WIN OPPORTUNITIES

- Massive deployment 6-7M of Catalyst 9K's Q4 2018.
- UC - Rip and Replacement of Avaya globally. 40,000 handsets

COMPETITIVE THREAT

- Aruba Network on WLAN 0.0433 in AWS
- Microsoft on UC side, have a MSFT ELA

STRENGTHS

- Large Cisco footprint, quality IT team, knows Cisco well. Very loyal Cisco.
- Strong Cisco team that leverage Cisco trainings and learning credits.
- Have roughly 30-40 employees going to CiscoLive.
- Looking to completely replace Avaya with Cisco UC within the next 12 months. 8-10M. 40,000 Handsets.

WEAKNESSES

- We Cisco are having challenges with quality issues. They have refereed to themselves as the test bed for Cisco.
- Confusing licensing models. Network ELA not ready for green field.

OPPORTUNITIES

- Looking to completely replace Avaya with Cisco UC within the next 12 months. \$8-10M. 40,000 Handsets.
- Network upgrades and new sites. \$10-\$15M.
- Some SD-WAN, they have 200 locations.
- ELA's for UC and Network.

THREATS

- My biggest threat is with collaboration, Microsoft Teams is scary.
- Quality issues continue to trouble the teams at Raytheon during testing phases.
- Really need to have a clearer picture of Cisco licensing.

FINANCIAL SNAPSHOT

Projected Product Spend 111 Million
Projected Services Spend 35 Million
Bookings 126 Million

CISCO SERVICES

AS, SmartNet Collaborative Support

EXPERTISE

IT leader with very strong technical background and experience in financial industry.

RESPONSIBILITIES

Global Infrastructure Strategy and Engineering

AREAS OF INFLUENCE

- UC
- Data Center
- Enterprise Networking
- Security

DNA CENTER

Concern about scale for Wells Fargo given given experience their experience with scaling of ISE for example and quality challenges.

SDA

Too cutting edge for Wells Fargo, current focus is on SGTs with cat9200/9300 & ISE and positioning SDN later in the branch when it can scale to Wells Fargo level.

SDWAN

Customer has certified Viptela. Looking at a production pilot over the next few months. Target CY19/20 roll out.

VIRTUALIZATION

Yes, large VMWare customer, would consider containers. Software Defined Data Center focus.

CLOUD

Not much movement to cloud due to their security concerns. We are trying to position WebEx with hybrid capabilities.

EFT

Wells Fargo has not done EFTs traditionally. However, recent direction is that they now want to look for opportunities to participate in EFTs.

TALKING POINTS
ISSUES CUSTOMER MIGHT RAISE

Code quality impacting product qualification, impact of PSIRTS, regulatory compliance, Integration between solutions (SDA, SD-WAN, VXLAN-EVPN), E2E Segmentation).

KEY POINTS TO REINFORCE

Strong adoption/success of the cat9k in the market, Patchability, DevNet, code quality improvements.

COMPETITIVE ISSUES

Availability/timing of the cat9200 to address competition with HPE/Aruba for the retail switchingDCNM capabilities – hope is DCNM 11 will address this for standalone N9K VXLAN-EVPN

BIG WIN OPPORTUNITIES

Refresh of 11K switches for their branch bank and Overarching product refresh of multiple domain areas and services to help.

COMPETITIVE THREAT

Overall multi-vendor strategy driven by challenges quality challenges
EN: HPE/Aruba for retail bank switching and for wireless, JNPR for backbone
Collab: Verizon, Zoom & Microsoft
Security: PAN, Checkpoint
DC: Arista and JNPR for switching and HP for compute, Apstra for DC Automation

STRENGTHS

- 4 years into 5 year refresh deal with Cisco – Cisco has large install base
- Heavy engagement of Cisco Advanced Services
- Large investments in Cisco technologies across all domains including successful Meraki branch utility(IoT) deployment and 1M port ISE 2.2 802.1X deployment
- Customer commented that Cisco focus on quality is starting to pay off

WEAKNESSES

- Frequency of PSIRTS and time to code release fixes
- Time it takes to certify new Cisco solutions due to perceived quality or lack of capabilities
- Loss of #1 and #2 NGFW position due to lack of required features
- Overall perception of Cisco as a leading security vendor when we can't meet their NGFW requirements

OPPORTUNITIES

- Branch switching refresh of 11K switches – positioning cat9200 & 9300
- Next gen DC switching platform for Software Defined Data Center
- Tetration adoption is looking positive
- Cisco solutions offering As a Service
- Simplification, software agility, compliance auditing

THREATS

- Multi-vendor strategy
- Low cost of HPE/Aruba branch switching solution
- ACI is viewed as proprietary
- Customer is looking at alternatives to DCNM due to concerns in capabilities and this may impact the N9K

FRED CHA
Global Architect

TRUST IN CISCO
HIGH
PERSONAL INFO

Home	Los Angeles
Interests	CCIE R&S, golf, food, investing
Languages	English & Korean, limited Portuguese

FINANCIAL SNAPSHOT

Projected Product Spend 5 Million
Projected Services Spend 1.2 Million
Bookings FY18 - \$1.6M

CISCO SERVICES

SmartNet, AS, TSOM

EXPERTISE

As Global Architect, Fred is constantly discovering opportunities to unify solutions across technical architectures which integrate holistically. An IT Visionary with a lean IT staff, his approach is to simplify day-to-day operations while adding scale and automation, and future-proofing a technology-focused environment. He strives to align maturely-vested IT partners to Westfield's digital vision which is key to continuing a successful relationship.

RESPONSIBILITIES

Provide infrastructure architecture direction to Day 2 Day Corporate Operations, Public and Private Cloud, Airports and digitization of Commercial Shopping Centers' "Smart Centers" globally using technologies that include networking, collaboration, mobility, security, consumer engagements, datacenter and security.

AREAS OF INFLUENCE

- Enterprise Networking, Security, UC, DC Switching, Collaboration

DNA CENTER

Global scalability deficiencies which requires multiple systems across 62+ sites.

SDA

Waiting on stability and clear direction in the feature sets.

SDWAN

Currently under evaluation, no immediate plans.

VIRTUALIZATION

Yes, large VMware customer, would consider containers.

CLOUD

Moving SmartCenter workloads to AWS.

EFT

Has AppDiscovery EFTs in progress.

TALKING POINTS
ISSUES CUSTOMER MIGHT RAISE

FirePOWER Software bugs, and limited Operation feature sets

KEY POINTS TO REINFORCE

DNA is ready and being adopted by large customers. Can take advantage of Assurance, Automation without SDA Fabric.

COMPETITIVE ISSUES

EA adoption due to limited resources from Westfield has been a challenge.

- EA adoption via Cisco AS has also been a challenge in commercial to locate resources.

BIG WIN OPPORTUNITIES

ACI Multi-Sites, adoption of Cisco security Products with Integration, Reduce FirePOWER Bugs.

COMPETITIVE THREAT

Zoom, Microsoft, Palo Alto, VMware, NetApp, CarbonBlack, SKyHigh, FireEye, Yammer

STRENGTHS

- CIO Partnership
- Fred has a very solid networking foundation, and with the many projects deployed at Westfield ACI, iWAN, HD WiFi, CMX, CMX Engage, etc. Has a good understanding of the Cisco ecosystem.

WEAKNESSES

- Fred is still an up-and-coming leader, and at times, he can be impatient.

OPPORTUNITIES

- SDA
- Global Video
- Global WebEx
- Airport terminal digitization (HD WiFi, CMX Engage, SD Access, SD WAN, Video)
- Land and Expand, Security, C1, Collaboration, DC
- Digital advertising leveraging Cisco Vision

THREATS

- 3rd Party security vendors (CrowdStrike, SkyHigh, etc.)
- 3rd Part collaboration companies (Zoom, BlueJeans)
